

# StandardAero seeks a Material Specialist

## Setting a New Standard for your Career!

StandardAero, a Dubai Aerospace Enterprise (DAE), specializes in engine maintenance, repair, and overhaul (MRO) services for business and general aviation, air transport, and military aircraft.

We employ the highest quality professionals in locations worldwide and are dedicated to enhancing the ownership and operating experience for every customer.

We are in search of a **Material Specialist** who would love to work for a stable, growing organization who is an industry leader in MRO.

### Duties include:

- Carrying out inventory control functions by balancing company goals (cost, quality, delivery), setting up and maintaining ABC analysis of inventory, monitoring and controlling customer consignment parts, disposing of excess/obsolete inventory, rescheduling orders if their receipt is premature, monitoring reduce to spares inventory levels, and transferring inventory between service centre locations if necessary.
- Managing, planning and reporting on the status of all inventory owned by the business unit; includes working with and setting targets with the service centers. Planning the purchase of all assigned inventory based on forecasts, percentage replacement factors and the alternate parts data file.
- Obtains quotations from vendors to ensure favourable quality, price and delivery terms; researches new products and vendors; provides data to technical staff and assists them in purchasing decisions. Expedites orders to ensure timely delivery of purchases by verifying initial demands and analyzing backorder reports.
- Interfaces with vendors, staff and management to resolve discrepancies, answer questions and provide guidance and training on inventory systems. Recommends enhancements to material planning systems.
- Controls data integrity of inventory systems by creating and updating item master files, analyzing engineering control changes, monitoring past due purchase orders and work-in-progress, researching inventory discrepancies, verifying and updating alternate parts file, and verifying and updating standard costs.
- Exhibits an understanding of complex material/financial situations.
- Carries out new, used and sub-contract supplier/vendor development for the business unit by sourcing new vendors, negotiating price and delivery terms, administering vendor qualification surveys, and educating suppliers on the material policies and procedures of the business unit.
- Reviews and recommends updates to company instructions and material policies and procedures.
- Monitors and reports on measures of performance including inventory levels, overall shortages, opportunity costs, inventory turns, average costs by supplier, fill rates, supplier due date compliance and supplier rejects.
- Interacts with Logistics to ensure maximization of freight savings and to communicate priority shipments of incoming materials.

**Qualifications include:**

- Strong planning, organizational, analytical, negotiation, interpersonal, decision making, oral and written communication skills.
- Thorough knowledge of inventory control, purchasing and production management computer systems.
- University bachelor degree, or equivalent combination of education and experience.
- 75% completion of certification program (PMAC, APICS, CPM or CMA) an asset.
- Experience in an inventory or manufacturing environment.

**Environment for career development and advancement**

We offer an environment for career development and advancement and provide a competitive compensation and benefits program including, but not limited to, medical, dental, vision plan, and a company matched pension program.
